USN :- 4 AL17EC006
Sem & sec : 6th B.

* Many wonder about the difference b/w leadership & management. Are they mutually exclusive?

* A manager is the member of an organization with responsibility of carrying out the four important function of the management
  → planning → orgaizing → leading → controlling.

* Most manager also tend to be leaders, but only IF they are adequately carry out the leadership responsibilities of management which includes communication, Motivatation, providing inspiration and guidance.

* Not all the managers are leaders.

* Bz some of them have poor leadership qualities and employees follows orders from their mangers because they are obligated to do so not necessarily.

* Management controls or directs people / resources in a group according to principles or values that have been established.

* It is an oversimplification to think that leaders lead and followers follow, because the relationship b/w leadership, management and followers is complex one.

* leadership and management are often part of same role because there is a continual adjustment of the direction are controlling resource to achieve that direction.
